Investors are set on intelligent technology...

Linz, Austria - Robart, a technology company which has developed autonomous AI for the consumer mass market has secured a EUR 6.1 Million B-round. Major International brands are using Robart's technology to create disruptive consumer robots with unique Smart Home functionality. First products with Robart's new generation technology debuted at IFA 2017 and will be in markets in the next weeks.

CM-CIC Innovation, a capital holding company of the Crédit Mutuel CM11 group in France, lead this new investment round and was joined by the existing investors Innovacom, Robert Bosch Venture Capital and SEB Alliance.

Stéphane Simoncini from CM-CIC Innovation, will also join Robart's board of directors. "The market trends are definitively going to a massive use of robots in our everyday lives," explained Simoncini, Investment Director Innovation at CM-CIC Innovation. "We need those robots to be intelligent, to understand what they are doing and in which context they are working so they can learn and become smarter."

Robart develops IoT connected systems for artificial intelligence and navigation, which make household robots not only act and navigate intelligently, but also understand their surroundings and adapt to any changes that may take place between uses. Their customers are large home robot manufacturers that incorporate this system into their products. Vacuum cleaners using Robart's navigation technology interpret their surroundings intelligently, create a map of the apartment and are able to orient themselves. Communication between the user and the robot is simple and intuitive using Amazon's Alexa and a smartphone. Robart's technology is the first solution of this kind currently out in the market.

Michael Schahpar, Founder and Commercial Director of Robart, explains the company's roadmap: „We want to use these resources to strengthen our market position in Europe, Asia and the USA. The confidence and commitment of our investors confirms our objectives and supports our vision of being a revolutionary brand in this market segment.”

Home robots belong to the fastest growing segment of home appliances, with analysts forecasting a sales growth of up to 40 percent. Currently mainly found as vacuum cleaners, in the coming years household robots will take over many

different areas, such as fetch and carry tasks, entertainment, help for the elderly and home security.

Harold Artés, Founder and Technical Director of Robart, is already looking into the future: „The development of home robots in the future will be similar to that of smartphones, with new functions added every year. Robart’s Navigation Technology is on its way to becoming the leading system for home robots, much like Android is a leading operating system for mobile phones.”

About CM-CIC Innovation

CM-CIC Innovation is a subsidiary of CM-CIC Investissement, member of Crédit Mutuel CM11 group, specializing in venture capital investments. Its aim is to invest in companies that are developing promising technologies. CM-CIC Innovation selects companies with strong growth potential in dynamic sectors like information technology, telecoms, electronics, life sciences, new materials and environmental technology.

CM-CIC Innovation's policy is to provide long-term support to innovative start-ups by investing in their equity, in order to maximize their chances of success.
